

Supplementary Table 3. Subsequent HSIL histologic and/or cytologic diagnosis in 22 cases with an initial inconclusive diagnosis

	No.	HSIL histologic diagnosis alone	HSIL cytologic diagnosis alone	HSIL histologic and cytologic diagnosis		
				The earlier HSIL histologic diagnosis compared to cytologic	The earlier HSIL cytologic diagnosis compared to histologic	The simultaneous HSIL histologic and cytologic diagnosis
Overall	22	5/22 (22.7)	5/22 (22.7)	1/22 (4.5)	9/22 (40.9)	2/22 (9.1)
p16 status						
p16 positive	13	4/13 (30.8)	2/13 (15.4)	0/13 (0.0)	7/13 (53.8)	0/13 (0.0)
p16 negative	9	1/9 (11.1)	3/9 (33.3)	1/9 (11.1)	2/9 (22.2)	2/9 (22.2)

Values are presented as number (%).

HSIL, high-grade squamous intraepithelial lesion.
